

### WHAT IS GREEN?

With the increase in greenhouse gasses, climate change and pollution, global warming is no more just a concern, it is a very real and impending threat to the survival of our planet. The ideal of sustainability or 'green' describes a perpetual state of economic, social, and ecological prosperity. In the face of mounting consequences – and indeed multiplying opportunities – organizations are seeking to shift their products, services, and practices towards a model that gives equal consideration to people, planet, and profit. Welcome to Nicole Sherwin Green Events

From Celebrity driven green carpet gala events, weddings and private cocktail functions to spectacular awards presentations, fashion shows and film premieres, Nicole Sherwin Green Events has refined the art of fusing style and elegance with minimum impact on the environment in planning, managing and executing elite, creative and awe-inspiring events.

With a deep understanding of Hollywood, every detail is managed with the utmost delicacy, discretion, eco-consciousness and total dedication to the vision.
